Recommendations & Method

How to play these predictions

STRATEGY: Back clear favourites where the model is confident (>60% advance)

to bank safe points; differentiate on tighter ties and on the Golden Boot,

where a well-placed contender on a deep team can outscore the favourite.

Model's title pick: Argentina (20.4%).

Champion pick: Argentina (20.4%). Safe R16 backers: France, Spain, England,

Argentina, USA, Portugal.

Methodology

1. Team strength starts from Elo priors adjusted by researched form/injury notes.

2. A Dixon-Coles bivariate Poisson model turns strength into scoreline distributions;

parameters are refined by a ridge-penalised fit on observed results (shrinking to priors).

3. A Monte Carlo simulation plays out the bracket many times -> progression probabilities,

with extra time and strength-tilted penalty shootouts for knockout ties.

4. Each team's expected goals are shared among its players (form-adjusted) and weighted by

how far the team is projected to advance -> per-stage and Golden Boot scorer forecasts.

Data provenance

Verified: group draw, reported group winners, R32 anchor ties, Golden Boot tallies.

Illustrative/projected: unplayed scores and not-yet-confirmed bracket slots.
